

## Wyoming Department of Education Required Virtual Education Course Syllabus

### Sheridan County School District # 1

|              |   |                 |         |
|--------------|---|-----------------|---------|
| Program Name | Sheridan County School District #1 Virtual School | Content Area    | MA      |
| Course ID    | AC02062   | Grade Level     | 9       |
| Course Name  | Integrated Mathematics I-CCSS                     | # of Credits    | 1       |
| SCED Code    | 02062   | Curriculum Type | Acellus |

#### COURSE DESCRIPTION

Acellus Integrated Mathematics is the first course of a three-part series that includes algebra, geometry, probability, and statistics. This high school math pathway is patterned after

| STANDARD # | BENCHMARK (Standard/Indicator) <a href="#">Use the Standards and Benchmarks as Spreadsheets</a>   |
|------------|---|
| N.Q.1      | Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.*  |
| N.Q.2      | Define appropriate quantities for the purpose of descriptive modeling.*   |
| N.Q.3      | Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.*  |
| A.SSE.1    | Interpret expressions that represent a quantity in terms of its context.*   |
| A.SSE.1a   | Interpret parts of an expression, such as terms, factors, and coefficients.*  |
| A.SSE.1b   | Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+r)^n$ as the product of $P$ and a factor not depending on $P$ .*  |
| A.CED.1    | Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.*  |
| A.CED.2    | Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.*  |
| A.CED.3    | Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.*  |
| A.CED.4    | Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. For example, rearrange Ohm's law $V = IR$ to highlight resistance $R$ .*  |
| A.REI.1    | Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.   |
| A.REI.3    | Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.  |
| A.REI.5    | Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.   |
| A.REI.6    | Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.  |
| A.REI.10   | Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).   |
| A.REI.11   | Explain why the $x$ -coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.* |
| A.REI.12   | Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.   |

|         |   |
|---------|---|
| F.IF.1  | Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$ . The graph of $f$ is the graph of the equation $y = f(x)$ .   |
| F.IF.2  | Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.   |
| F.IF.3  | Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1$ , $f(n+1) = f(n) + f(n-1)$ for $n \geq 1$ ( $n$ is greater than or equal to 1).  |
| F.IF.4  | For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.* |
| F.IF.5  | Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function $h(n)$ gives the number of person-hours it takes to assemble $n$ engines in a factory, then the positive integers would be an appropriate domain for the function.*   |
| F.IF.6  | Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.*   |
| F.IF.7  | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.*  |
| F.IF.7a | Graph linear and quadratic functions and show intercepts, maxima, and minima.*  |
| F.IF.7e | Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.*   |
| F.IF.9  | Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.   |
| F.BF.1  | Write a function that describes a relationship between two quantities.*   |
| F.BF.1a | Determine an explicit expression, a recursive process, or steps for calculation from a context.   |
| F.BF.2  | Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.*   |
| F.BF.3  | Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$ , $k f(x)$ , $f(kx)$ , and $f(x + k)$ for specific values of $k$ (both positive and negative); find the value of $k$ given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. Include recognizing even and odd functions from their graphs and algebraic expressions for them.                  |
| F.LE.1  | Distinguish between situations that can be modeled with linear functions and with exponential functions.*   |
| F.LE.1a | Prove that linear functions grow by equal differences over equal intervals and that exponential functions grow by equal factors over equal intervals.*  |
| F.LE.2  | Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).*  |
| F.LE.3  | Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function.*   |
| F.LE.5  | Interpret the parameters in a linear or exponential function in terms of a context.*  |

|         |  |
|---------|--|
| G.CO.1  | Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.  |
| G.CO.2  | Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).   |
| G.CO.3  | Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.   |
| G.CO.4  | Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.   |
| G.CO.5  | Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.   |
| G.CO.6  | Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.   |
| G.CO.7  | Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.   |
| G.CO.8  | Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.   |
| G.CO.12 | Make formal geometric constructions with a variety of tools and methods (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.). Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line. |
| G.CO.13 | Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.  |
| G.GPE.4 | For example, prove or disprove that a figure defined by four given points in the coordinate plane is a rectangle; prove or disprove that the point $(1, \sqrt{3})$ lies on the circle centered at the origin and containing the point $(0, 2)$ .   |
| G.GPE.5 | Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).  |
| G.GPE.7 | Use coordinates to compute perimeters of polygons and areas of triangles and rectangles, e.g., using the distance formula.*  |
| S.ID.1  | Represent data with plots on the real number line (dot plots, histograms, and box plots).*   |
| S.ID.2  | Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.*  |
| S.ID.3  | Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).*  |
| S.ID.5  | Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.*   |
| S.ID.6  | Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.*   |
| S.ID.6a | Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.*  |
| S.ID.6b | Informally assess the fit of a function by plotting and analyzing residuals.*  |

|         |   |
|---------|---|
| S.ID.6c | Fit a linear function for a scatter plot that suggests a linear association.*   |
| S.ID.7  | Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.* |
| S.ID.8  | Compute (using technology) and interpret the correlation coefficient of a linear fit.*                                |
| S.ID.9  | Distinguish between correlation and causation.*   |

**SCOPE AND SEQUENCE**

| UNIT OUTLINE | STANDARD#   | OUTCOMES<br>OBJECTIVES/STUDENT CENTERED GOALS  |
|--------------|---|--|
| Unit 1       | A.SSE.1, A.SSE.1a, A.CED.1, A.CED.2, A.REI.1  | This introductory unit of this course introduces variables and expressions, order of operations, real numbers, properties, adding and subtracting, and multiplying and dividing. This unit also includes the distributive property, introduction to equations, and two variable equations.                                 |
| Unit 2       | N.Q.1, N.Q.2, N.Q.3, A.CED.1, A.CED.4, A.REI.1, A.REI.3, F.BF.1   | In this unit students learn about one step equations, two step equations, multi-step equations, variables on both sides, literal equations, ratios and rates, conversions, similar figures, as well as percents, and percent change.   |
| Unit 3       | A.SSE.1, A.SSE.1b, A.CED.1, A.REI.3   | Within this unit students will learn about inequalities, addition and subtraction with inequalities, multiplication and division with inequalities, multi-step inequalities, sets, and interval notation. Students will also learn about compound inequalities, absolute value equations, and absolute value inequalities. |
| Unit 4       | N.Q.2, A.SSE.1, A.SSE.1a, A.SSE.1b, A.CED.2, A.REI.10, F.IF.1, F.IF.2, F.IF.3, F.IF.4, F.IF.5, F.IF.7, F.IF.7a, F.IF.9, F.LE.2, F.LE.5, S.ID.6, S.ID.6a, F.BF.2             | In this unit, students learn about two variable graphs, patterns, non-linear graphs, graphing a function, writing a rule, and relations and functions. The unit also introduces the composition of functions and arithmetic sequences.   |
| Unit 5       | N.Q.2, A.SSE.1, A.SSE.1a, A.CED.2, F.IF.4, F.IF.6, F.IF.7, F.IF.7a, F.IF.9, F.LE.2, F.LE.5, S.ID.6, S.ID.6a, S.ID.6b, S.ID.6c, S.ID.7, S.ID.8, S.ID.9                       | In this unit students learn about rate of change, direct variation, slope-intercept, and point-slope. Students also learn about standard form, parallel and perpendicular, as well as scatter plots and trend lines, and absolute value functions.   |
| Unit 6       | A.CED.3, A.REI.5, A.REI.6, A.REI.12   | In this unit students will gain the knowledge of solving systems by graphing, substitution, elimination, and applications of systems. Students will also learn about linear inequalities and systems of inequalities.  |
| Unit 7       | A.SSE.1, A.SSE.1a, A.SSE.1b, A.CED.2, A.REI.11, F.IF.3, F.IF.4, F.IF.5, F.IF.7, F.IF.7e, F.IF.9, F.LE.2, F.LE.3, F.LE.5, S.ID.6a, S.ID.6b, F.BF.1a, F.BF.2, F.LE.1, F.LE.1a | In this unit students learn about zero and negative exponents, multiplying powers, more multiplication properties, division properties, rational exponents, and exponential functions. Students also learn about exponential growth and decay, geometric sequences, and mathematical modeling.                             |
| Unit 8       | N.Q.1, N.Q.2, S.ID.1, S.ID.2, S.ID.3, S.ID.5  | Students begin this unit by learning about frequency and histograms, and statistical measures. Students also learn about the usefulness and importance of box and whisker plots and two-way tables.  |

|         |  |  |
|---------|--|--|
| Unit 9  | N.Q.1, G.CO.1, G.CO.12, G.GPE.4, G.GPE.7                       | In this unit students will learn about nets and perspective drawings, points, lines, and planes, measuring segments, measuring angles, angle pairs, and basic constructions. Students also learn about coordinate planes and perimeter, circumference, and area.                     |
| Unit 10 | G.CO.1, G.CO.12, G.CO.13, G.GPE.5                              | Within this unit students gain knowledge concerning transversals, parallel lines, proving parallel lines, and parallel and perpendicular lines. Students also learn about angle and theorem, more constructions, equations of lines, and slopes of parallel and perpendicular lines. |
| Unit 11 | G.CO.2, G.CO.3, G.CO.4, G.CO.5, G.CO.6, G.CO.7, G.CO.8, F.BF.3 | In this unit students learn about translations, reflections, rotations, compositions, and congruence transformations. Students also learn about dilations, and similarity transformations.   |
| Unit 12 | G.CO.1, G.CO.13, G.GPE.7                                       | In the concluding unit of this course, students will learn about areas of parallelograms and triangles, areas of trapezoids, rhombuses, and kites. Students also learn about areas of regular polygons, circles and arcs, and lastly the length of arcs.                             |
